

# Auto Feed Shredders Exclusively by Techko

No more Sheet Load Limitations

No more Hand Feeding

- \* Auto Feed Shredders
- \* Exclusively by TECHKO
- \* Prime Manufacturer
- \* Innovator in the Paper Shredder Industry
- \* USA Patent: No. 5,975,445
- \* USA Patent No. 6,390,397

## Model SH92150

- Up to 150 sheets perload
- Continuous Run: up to 10 Hours
- 4 particlesizes in oneshred pass
- Micro Random Cross Cut:  
2/25"x 2/5", 2/25" x 18/25", 2/25"x 1",  
2/25"x 1-3/10"

Front Feed

## Model SH92100

- Up to 100 sheets perload
- Continuous Run: up to 30 Minutes
- 3 particlesizes in oneshred pass
- Random Cross Cut:  
5/32" x 4/5", 5/32" x 1-3/16",  
5/32" x 1-9/16"

Front Feed

A CES honoree  
recipient of the  
"Innovations Design  
& Engineering  
Award" for 2007.

## Model SH92050

- Up to 50 sheets perload
- Continuous Run: up to 30 Minutes
- 2 particlesizes in oneshred pass
- Random Cross Cut:  
5/32" x 1-9/16" and 5/32" x 2.0"

Front Feed

Since 1982 Techko Brand Represents Quality, Service, Integrity, and Commitment to Excellence

**As Chairman and CEO of Techko, Inc. in Irvine, California, Joseph Ko heads up one of the leading office equipment companies. A true prime manufacturer for over 24 years, he is the owner of various patents in the security alarm and office product industry. Hole punch machines, letter folding machines, multiple function work stations, and a variety of shredder products are just a few examples of these successful patents.**

"We are going to release the Auto Feed Shredder this year" said Ko, "We actually received the patent in the auto feed shredder back in 1999 and enhanced it in 2002, but we never released the product into the market, we have been waiting for the right opportunity". Ko continues stating, "Back in 1999, 2002, and prior to 2006, we just did not think the market/user was fully aware of shredders with various features. Now, we feel users/ markets are quite familiar with various application and sheet limitation of the shredder and now it is the right time to release the Auto Feed Shredder!" Ko explained his invention; "One of the major drawbacks in using a shredder is the user having to hold the paper to make sure it goes through the feeding throat, which is very user unfriendly. If one has a large amount of paper to be shredded, they will have to spend hours standing in front of the shredder waiting to feed a stack of paper into the throat, then grab another bundle, which is normally limited to a certain number of sheets or it will jam and overheat, and so on and so forth. This can become very cumbersome and time consuming. However, with our Auto Feed Shredder, a user only needs to lay the stack of paper ( 50, 100, 150 ) sheets into the feeding tray, and it will automatically pull the paper through and shred by itself no need to hold, no need to feed by hand, no need to worry about overheating, no max. sheet, and no need to waste your time". Ko believes that his Auto Feed Shredder invention can really benefit everyone and increase the efficiency of office productivity.

Ko holds many other patents, such as 2 & 3 hole adjustable Electric Hole Punch machine, Electric Letter Folding machine with sheet counter /speed control and his well known Pool Security Alarm! "I love the challenge of making new products which will benefit all of us. We became involved in the shredder industry 12 years ago due to our security product line expansion. Now, we are involved in other innovative and creative features for our shredder line. Our Random Cross Cut is the first time in the shredder industry a shredder can shred multiple size particles in one shred pass, which makes the reassembly time much longer and almost impossible. I have created an inner basket for CD/Credit Card particles by using magnetic connecting switches, which allows the particles to be separate from the paper."

"We want to be viewed as part of the industries innovators and creators and not just a prime manufacture. We have been in business for over 24 years, and we are still an entrepreneur type company. I have my own philosophy in managing the business and the company. Most of my management have been with the company for over 15 years. I demand a lot of my management, but I also work with them as a team and care for all my team members. I am fortunate to have a great team in the USA management and spend a lot of time in training our Asia division management teams and the employees. I have written several books about employee's training courses, and I have given many lectures as a guest professor in several universities across the country. Every year, I also bring some USA college students to train in our China factory so they cannot only have a better picture about the manufacturing environment and business, but also to bring our next generation into the international trade. I have 20-30 college students from China also training every summer for the factory experience and learning their trade. My friends and I have donated toward the building of 20 elementary schools in China, and establishing many scholarships for both high school and college. We are doing our share."
